Source: Survey of 250+ U.S. IT executives, cited in "2025 UiPath Agentic AI Report: Preparing for the Agentic Age"

"***Leveraging agentic automation in our UiPath integration is providing massive ROIs.*** *Exploring applications in sales and customer service is proving especially promising. These automated agents carry out the heavy lifting, allowing our sales team to focus on driving revenue. Similarly, deploying AI in customer service has measurable impacts, including* ***substantial time savings and shorter code cycles.***"

Akash Rana
Senior Manager IT Digital Automation, Regal Rexnord

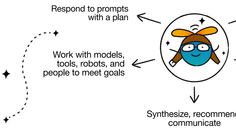

How is value created? By making it possible for AI agents to act.

A lot of work is taxing and time-consuming for people.

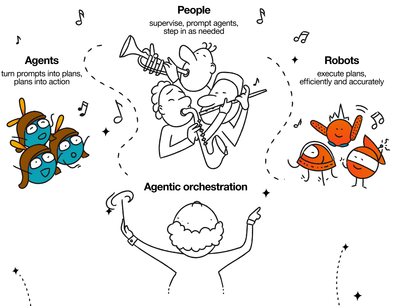

But AI agents are made for this kind of work!

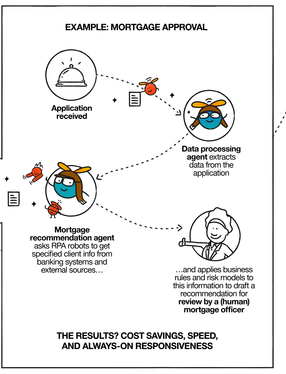

AI agents are a form of AI that can think, learn, and adapt.

Agentic automation provides the orchestration and governance that let AI agents do their best work.

AI agents can now take on so many things that once only people could do!

"*Utilizing agentic automation,* ***we can make better context-aware decisions and adapt swiftly to business changes.*** *It also delivers a seamless, user-friendly customer experience. The integration of an agentic automation in call centers consolidates all automations; streamlining processes, and empowering agents to use natural language for requests. The tool recognizes requests and activates the necessary automation, thus* ***lessening the load on our human workforce.***"
